GROWOPS GO · FLUTTER MOBILE

Screen gap report

What the app already has, and which screens the API catalog still needs

Prepared 10 October 2026 · Compared against the Flutter Mobile API Catalog

15	9	28
Areas already in the app	Screens that exist but are incomplete	Screens that are missing

1. Purpose

This note compares the current GrowOps Go Flutter app with the Flutter Mobile API Catalog. It is for the client to see which screens are already in the mobile app, which screens are only partly built, and which screens from the API catalog are not in the app yet.

The screens that exist today are demo screens. They use local sample data. They are not connected to the proposed APIs. This document does not include any code changes.

2. What the app already has

These areas already have a screen in the app. Each one lines up with a part of the API catalog.

Screen in the app	API area it covers
Login	POST /api/v1/auth/login
Profile	GET /api/v1/auth/me
Workspace switch	POST /api/v1/auth/switch-organization
Home	GET /api/v1/today
Grow areas and area detail	GET /api/v1/rooms
Strains (Genetics tab and Settings)	GET / POST /api/v1/strains
Seed lots list	GET /api/v1/seed-lots
Mothers list and mother detail	GET /api/v1/mothers
Batches list, batch detail, new batch	GET / POST /api/v1/batches and batch detail
Stage timeline and advance button	GET /batches/{id}/stages and advance-stage
Quick log	GET / POST /api/v1/batches/{id}/logs
Tasks	GET /api/v1/tasks and complete
Stock list and stock detail	GET /api/v1/inventory-items
Scan QR	Scan entry for batch and package codes
Trace	GET /api/v1/traceability

3. Screens that exist, but the API flow is not complete

These screens are in the app, but they do not cover the full flow described in the API catalog. A user can open the screen. The missing actions still need their own screens or forms.

Screen today	What is missing against the API
Harvest	Only a harvest form. No harvest list and no harvest detail. APIs: GET /harvests and GET /harvests/{id}.
Drying	A list and a simple check form. No drying-lot detail and no complete-drying step (output weight, temperature, humidity, moisture).
Curing	A list of lots in curing only. No curing-lot detail and no curing checks (burp, moisture, weight, inspection).
Packaging	Size and quantity only, then a SKU is added to stock. No packaging session, inputs, outputs, waste, release, or QR label.
Genetics	Strains, seed lots, and mothers. No cultivars. No clone batches.
Mother detail	Shows linked batches. No mother activity log and no retire action.
Environment	A report only. No screen to record a room reading or show threshold alerts.
Waste	A report only. No screen to create or list a waste log.
Inventory movements	A report only. Stock detail does not show movement history.

4. Screens that are missing

These screens are in the API catalog and are not in the Flutter app. Grouped the way a user would open them.

Nursery and planning

Missing screen	API
Facilities list	GET /api/v1/facilities
Cultivars list and create	GET / POST /api/v1/cultivars
Receive a seed lot	POST /api/v1/seed-lots
Create a mother plant	POST /api/v1/mothers
Mother activity log	POST /api/v1/mothers/{id}/logs
Retire a mother	POST /api/v1/mothers/{id}/retire
Clone batches list	GET /api/v1/clone-batches
Create a clone batch	POST /api/v1/clone-batches
Transfer clones into a growth cycle	POST /api/v1/clone-batches/{id}/transfer
Growth cycles list	GET /api/v1/growth-cycles
Growth cycle detail	GET /api/v1/growth-cycles/{id}
Create or edit a growth cycle	POST / PUT /api/v1/growth-cycles

Batch operations

Missing screen	API
Move a batch to another room	POST /api/v1/batches/{id}/move-room
Room move history	GET /api/v1/batches/{id}/room-history
Record an environment reading	GET / POST /api/v1/environmental-readings
Batch audit timeline	GET /api/v1/batches/{id}/audit-events

Post-harvest

Missing screen	API
Harvest list and harvest detail	GET /api/v1/harvests and GET /harvests/{id}
Drying lot detail and complete drying	GET /drying-lots/{id} and POST /drying-lots/{id}/complete
Curing lot detail	GET /api/v1/curing-lots/{id}
Curing checks	GET / POST /api/v1/curing-lots/{id}/checks
Waste log list and create waste log	GET / POST /api/v1/waste-logs

Packaging and finished lots

Missing screen	API
Package sizes	GET /api/v1/package-sizes
Packaging sessions list	GET /api/v1/packaging-runs
Packaging session detail (inputs, outputs, waste, balance)	GET /api/v1/packaging-runs/{id}
Add a finished lot, then release it with QR and label	POST /packaging-runs/{id}/outputs POST /packaging-outputs/{id}/release
Packaging waste line	POST /api/v1/packaging-runs/{id}/waste
Use bags or other packaging stock	POST /api/v1/packaging-runs/{id}/inputs
Public clone scan result	GET /api/v1/public/clones/{token}

5. In the app, but not in this API catalog

These screens are already built in the mobile app. The API catalog sent with this review does not define them. They are listed so the client can see they are extra, not missing.

Screen	Note
Sign up and forgot password	Auth catalog covers login, me, logout, and switch organization.
Store orders	No sales-order API in this catalog.
Invoices and new invoice	No invoice API in this catalog.
Clients	No client API in this catalog.
Payments	No payment API in this catalog.

Screen	Note
Reports hub	Reports exist in the app. The catalog's operational screens (readings, waste logs, audit events) are separate from these reports.

6. Suggested order if these screens are built next

This follows the priority already written in the API catalog, limited to the gaps above.

Priority	Build next
P0	Connect the screens that already exist: login, home, batches, stage advance, and daily log. Add move-room while batches are open.
P1	Growth cycles, harvest list and detail, drying complete, curing checks, and the full packaging session through release and QR.
P1	Traceability search is already a screen. It still needs to be wired to the API.
P2	Cultivars, seed-lot receive, mother log and retire, clone batches and transfer, facilities, waste logs, and environment readings.
P3	Batch audit timeline, inventory movements on the stock screen, and the public clone scan result.

POS420 lot pull (GET /api/pos420/lots) is a live integration for an external point of sale. It is not a grower screen in the mobile app, so it is not listed as a missing screen.
